

Preliminary Release

ANES 2010-2012 Evaluations of Government and Society Study, Dec. 2011 Survey

American National Election Studies

Stanford University & the University of Michigan

January 10, 2011

This document describes the ANES 2010-2012 Evaluations of Government and Society Study survey for December 2011, also known as EGSS-3.

Study Overview

The EGSS-3 is the third of several cross-sectional studies being conducted by ANES in 2010, 2011, and 2012 to test new instrumentation and measure public opinion between the presidential elections. The surveys are being conducted entirely on the Internet using nationally representative probability samples. Respondents are members of the Knowledge Networks KnowledgePanel, an omnibus panel of respondents recruited using telephone and address-based sampling methods who are provided free internet access and equipment when necessary.

Data collection occurred December 7 through December 13, 2011.

Preliminary Release

This is a “preliminary release” to give access to the data as quickly as possible. Preliminary data differ from complete ANES datasets in several important ways. Quality-control review, error correction, file formatting, and documentation are not complete. As such, the current dataset is a rough draft and **the preliminary data probably contain errors**. The preliminary file is meant to serve analysts who want to start working with the data as soon as possible and who are comfortable starting their work on a preliminary file with little documentation.

ANES staff are now working on the full release of the file, which we anticipate will be completed a few months after the preliminary release. It will replace the preliminary dataset and will be accompanied by expanded documentation. The full release may also include some changes to the data, such as error corrections and edits to the variable names and labels, to improve accuracy or usability. If you have comments or questions about the preliminary data, please send them to anes@electionstudies.org

EGSS-3 at a glance

Title:	ANES 2010-2012 Evaluations of Government and Society Study, December 2011 Survey
Short title:	ANES EGSS-3
Main purpose:	To test new instrumentation and measure public opinion regarding national leaders and political issues.
Population:	The study represents U.S. citizens age 18 or older.
Sample:	Random-digit-dial (RDD) and address-based sample (ABS) recruitment.
Design:	The EGSS is a series of cross-sectional surveys, each with a separate sample. It is not a panel study.
Mode:	Internet
Number of cases:	1,315 on the file, of whom 1,262 completed the survey
Field period:	December 7 through December 13, 2011
Response rate:	Pending, probably about 2.5 percent or less (AAPOR RR3)
Interview length:	Median of 23 minutes.
Weight:	Use the variable C3_weight for analyses that generalize to the population.
Sponsors & design:	The National Science Foundation funded the study, which was designed by the ANES Principal Investigators and senior staff.
Data collection firm:	Knowledge Networks, Inc.

Dataset Variables

The dataset includes data from the ANES questionnaire administered in December 2011 and from profile questionnaires administered by Knowledge Networks to the same respondents on prior occasions.

Variables on the file are as follows.

The first 57 variables on the file are administrative records, IDs, weights, and related items.

Variables C3_A1 through C3_ZY5 (58-245; 188 variables) are the data from the ANES questionnaire.

Variables C3_PPAGE through C3_pppa0129 (variables 246-476) are data from Knowledge Networks profile surveys. These profile surveys were administered prior to the ANES survey.

C3_timezone indicates the time zone at the respondent's location.

C3_SIGNUP indicates the date the panelist joined the KnowledgePanel.

C3_num_comp shows how many surveys the respondent completed for Knowledge Networks as of December 13, 2011.

C3_ppcmdate is the date the respondent completed the Core Profile survey.

Variables C3_t_IntroDisplay through C2_t_ZD3 (variables 481 through 597) record the elapsed time for components of the survey.

Variables C3_IntroDisplay_1 through C2_ZY5_4 (variables 598 through 1062) indicate if a respondent stopped taking the interview at a specific point in the survey.

Weights and Data Analysis

The data from the recontact survey are designed to be analyzed with weights. **You must use weights to generalize to the population.** For general discussion of these issues and detailed instructions for weighting and sampling error calculations for ANES studies, see DeBell (2010), *How to Analyze ANES Survey Data* (<http://www.electionstudies.org/resources/papers/nes012492.pdf>).

There are two weight variables on the preliminary data file:

C3_sampwt is the base weight that accounts for initial selection of the sample.

C3_weight is the poststratified weight for analysis that is intended to generalize to the population.

Standard errors (also called sampling errors), confidence intervals, and statistical significance tests must be calculated using methods appropriate for a complex-sample survey. For comprehensive general instructions, see DeBell (2010). The EGSS does not require stratum or cluster variables, but does need to be weighted.

Variable names in SPSS portable format

The SPSS Portable file format (.por) used for the preliminary data release is limited variable names of 8 or fewer characters. Variable names that originally exceeded 8 characters have been truncated as follows on this preliminary file. Note that numbered variables are often numbered differently on the .por file.

<i>Original Extended Name</i>	<i>Portable (.por file) Abbreviated Name</i>
c3_CaseID	c3_casei
C3_CD_NAME	c3_cd_na
