>> ABOUT THE EXPRESSIONS IN THE 1982 QUESTIONNAIRE (NAME Y X, Y. OR Z)

The 1982 tIME sERIES questionnaire made provisions to have interviewers fill in district/state candidate names in blank slots like the one depicted above. A comprehensive list of HOUSE, SENATE and GOVERNOR candidate and incumbent names was prepared for each of the 173 districts in the sample and the interviewers used the lists to pre-edit names where appropriate depending on the district of interview. These candidate lists are reproduced in the green pages section of this documentation.

The (NAME #) expression will generally list more than one candidate number. For any given district, however, one of two possibilities will hold: 1) there will be one and only one name in the district candidate list qualifying for inclusion on the basis of the numbers listed in the expression; or 2) there will be no number in the district candidate list matching any of the numbers in the expression. An instance of no matching numbers arises for a question about the candidate challenging a district incumbent when, in fact, the incumbent is running unopposed. Interviewers were instructed to mark "NO INFO" those questions involving unmatched candidate numbers in the (NAME #) expression.

In the candidate list, each candidate or incumbent is assigned a number or code. Numbers beginning with 1 (11-19) are for the Senate, numbers beginning with 3 (31-39) are for the House of Representatives, and numbers beginning with 5 (51-58) are for governors. In addition, the code or number assigned to a name has an intrinsic meaning—it denotes the functional role of that person in the context of the 1982 general elections. For example, candidate number 33 is used for a Democratic House incumbent seeking re-election and playing, therefore, the dual role of House incumbent and Democratic candidate for the House of Representatives in the 1982 elections. The precise meaning of each candidate number used in the study is given below. Needless to say, you will need to understand the scheme that was used in order to work effectively with the questions involving (NAME #) expressions.

Virtually all states redefined congressional district boundaries (redistricted) during 1981 or 1982 in accordance with new 1980 Census population estimates. In the candidate list, the term 'incumbent' denotes a House candidate who was a member of Congress prior to the 1982 general elections. Unlike 1978 and 1980, the incumbent's district in 1982 may consist of a fairly different geographic area than the area covered by the district prior to the boundary changes; therefore, although the 'incumbent' House candidate served in Congress as of the 1982 elections, depending on changes in district boundaries, he or she may or may not have been the survey respondent's district incumbent before 1982.

>> 1982 FEELING THERMOMETER (C5)

- 1. RE: Massachusetts: Edward Kennedy's name is referenced twice in the feeling thermometer for respondents in Massachusetts. Respondents in this state were asked to rate Kennedy only once, at the first location (CAC). The response was then post-edited into the second reference (C5e).
- 2. RE: Liberal, Conservative, and Independent Candidates The Congressional districts listed below had an independent or minor party candidate running in 1982, in addition to a Democratic and/or Republican candidate.

These third party candidates were included in the description of the Congressional races. The Type of House Race (V10) was coded 13, 19, 23, 29, 49, 56, 57 or 59, as appropriate.

CA	43	NY	10				
GA	05	NY	11	NY	16	NY	27
NY	03	NY	12	NY	18	NY	28
NY	04	NY	14	NY	20	PA	02
NY	06	NY	15	NY	25	UT	03

The minor party candidates were referenced in the following questions only:

C5p	J4g	J7g
Jlm	J5g	L4
J3q	J6g	

3. RE: New York Congressional Districts: Liberal and Conservative candidates running in New York have been included in all New York districts. In cases where the Democratic and Republican candidates also had the support of the Liberal and Conservative parties, respectively, they are assigned the candidate number appropriate for Democratic or Republican candidates, and treated throughout the questionnaire only as Democratic or Republican candidates.

>> 1982 DISTRICT OF COLUMBIA INTERVIEWS

Since there were no races for the U.S. Senate or the U.S. House of Representatives in the District of Columbia, certain questions in the interview schedule were inappropriate for respondents living in that area. Interviewers in the District of Columbia were instructed to omit questions about the House and Senate races. The list of questions omitted for DC respondents includes:

C2, C2a,	C2b	J5e-J5g		
C4, C4a,	C4b	J6e-J6g		
C5e-C5p		J7e-J7g		
E1-E44		K2,K2a, Kl0a		
F8, F8a		L4, L4a		
Jlc-Jlm		L6, L6a		
J3e-J3g		L8, L8a		
J4e-J4g				

Several checkpoint questions were also inappropriate for District of Columbia interviews and were coded as follows:

C3, E5, E8, F7, L5, L7 = 9 K10 = 2

>> 1982 VOTE QUESTIONS (SECTION L)

According to Louisiana election laws any candidate receiving over fifty per cent of the primary vote is elected to office and does not appear on the ballot in the November general election. In both Congressional Districts, 05 and 07, the candidates were so elected. These races were coded 14, identifying them as districts with incumbents running unopposed (see V.10). The candidate number assigned was 33 - Democratic Incumbent (see Note A).

The vote section, Q L4-L8, was omitted for these districts. Respondents were asked L1-L3 and L9 since they did have the opportunity to vote on other state matters in November. Alterations were also made to the question wording in C2 and E1 (see specific questions for changes).

>> 1982 GEORGIA 04 AND 05

Congressional districts 04 and 05 in Georgia were late in finalizing a redistricting plan and, as a result, their congressional primary was held November 2, followed by a specialHouse election held November 30. Interviewing in Georgia 04 and 05 was delayed until December 1, after the special House election. Residents of these two Georgia districts did go to the polls November 2 to vote for all other offices and issues on Georgia's 1982 ballot.

To ascertain the voting behavior of respondents in GA04 and 05, question L1 was administered, and if the respondent reported not voting November 2, he/she was asked an additional question about whether they voted in the special November 30th election. (See L1 for question text.) This additional question was not coded separately, but respondents who reported voting in the special House election were recoded to a "1. Yes, did vote" answer in L1. Thus, L1 captures respondent turnout in either the November 2 or the November 30 election for GA04 and GADS respondents.

>> 1982 UNOPPOSED RACES

In the congressional districts listed below, only one major party candidate ran. (Some of these districts may have had minor party opposition.)

AL03	MA03	NY18
CA25	MI01	ОН03
FL10	MI14	PA02
FL17	MS03	TX17
OA02	NC10	TX22
IL01	NE03	UT03
IL08	NJ13	WI09
KY01	NY06	
MA01	NY16	

^{*}LAOS (See Note D)

>> 1982 CANDIDATE NUMBER MASTER CODE 10/82 (Revised for 1982 redistricting)

^{*}LA07

For States With No Incumbent Senator Running

- 11. Democratic Candidate
- 12. Republican Candidate
- 19. Other Senate Incumbent whose term is not up
- 20. Independent Candidate

For States With No Senate Race

- 17. (1st) Incumbent
- 18. (2nd) Incumbent

For Districts With No
Incumbent Representative Running

- 31. Democratic Candidate
- 32. Republican Candidate
- 39. Independent Candidate

For States With No Incumbent Governor Running

- 51. Democratic Candidate
- 52. Republican Candidate
- 58. Independent Candidate

For States With No Governor Race

59. Incumbent Governor

For States With Running Incumbent Senator

- 13. Democratic Incumbent
- 14. Republican Incumbent
- 15. Democratic Candidate
- 16. Republican Candidate
- 19. Other Senate Incumbent whose term is not up
- 20. Independent Candidate

For Districts With Running Incumbent Representative(s)

- 33. Democratic Incumbent
- 34. Republican Incumbent
- 35. Democratic Candidate
- 36. Republican Candidate
- 37. Liberal or Conservative Candidate
- 39. Independent Candidate

For States With Running Incumbent Governor

- 53. Democratic Incumbent
- 54. Republican Incumbent
- 55. Democratic Candidate
- 56. Republican Candidate
- 58. Independent Candidate

Used in the Vote Section (L) only for respondents who voted outside of district/state of interview.

For States/Districts With No Incumbents Running

- 81. Democratic Candidate
- 82. Republican Candidate

For States/Districts With Running Incumbents

- 83. Democratic Incumbent
- 84. Republican Incumbent
- 85. Democratic Candidate
- 86. Republican Candidate
- 87. Liberal or Conservative Candidate
- 89. Independent Candidate
- 91. Democrat No Name Given

89. Independent Candidate 91. Democrat - No Name Given

>> 1982 CANDIDATE MASTER CODE

PARTY ONLY -- PEOPLE WITHIN PARTY 0001 Johnson 0002 Kennedy, John; JFK 0003 Kennedy, Robert; RFK 0004 Kennedy, Edward "Ted" 0005 Kennedy, NA which 0006 Truman 0007 Roosevelt; "FDR" 0008 McGovern 0009 Carter 0010 Mondale 0011 McCarthy, Eugene 0012 Humphrey 0013 Muskie 0015 Wallace 0031 Eisenhower; Ike 0032 Nixon 0034 Rockefeller 0035 Reagan 0036 Ford 0037 0038 Connally 0039 Kissinger 0040 McCarthy, Joseph 0051 Other national party figures (Senators, Congressmen, etc.) 0052 Local party figures (city, state, etc.) 0053 Good/Young/Experienced leaders; like whole ticket 0054 Bad/Old/Inexperienced leaders; dislike whole ticket 0097 Other people - within - party reasons

PARTY ONLY -- PARTY CHARACTERISTICS

- O101 Traditional Democratic voter: always been a Democrat; Just a
 Democrat; never been a Republican; just couldn't vote Republican
 O102 Traditional Republican voter; always been a Republican; just a
 Republican; never been a Democrat; just couldn't vote Democratic
 O111 Positive. personal. affective terms applied to party ~ good/nice
 people, etc.
 O112 Negative, personal, affective terms applied to party -- bad/lazy
 people, etc.
 O121 Can trust them; they keep their promises; you know where they
 stand
 O122 Can't trust them; they break their promises; you don't know where
 they stand
 O131 Party is well-organized, sticks together, is united; members are
 disciplined; votes party line
- O132 Party is poorly-organized/really two parties/divided/factionalized; members not disciplined; doesn't

- vote party line
- O133 Party is (more) representative/good cross-section of the country; encompasses a wider variety of views/people; is more at the center of the country's views
- 0134 Party is (less) representative/bad cross-section of the country; encompasses more restricted views; is less at the center of the country's views
- 0141 Reference to party's most recent National Convention; party's process/method of selecting presidential/vice-presidential candidates
- O151 Performance of local branch of party; how they've done in this state/county/town
- 0161 Reference to the predominant faction that R sees as being in control of the party (NA which faction); "I don't like the people running it"
- 0162 Reference to Northerners/Liberals (as in control) of Democratic Party
- 0163 Reference to Southerners/Conservatives (as in control) of Democratic Party
- 0164 Reference to Easterners/Liberals/Moderates (as in control) of Republican Party
- 0165 Reference to Midwesterners/Westerners/Southerners/Conservatives (as in control) of Republican Party
- 0167 Can't win; doesn't have a chance
- 0168 Can win; party can't be beat
- 0169 Too big a party; there are too many of them; party is too powerful
- 0170 Too small a party; there are not enough of them; party is too weak
- 0171 Listens (more) to people; takes (more) into consideration the needs and wants of people; understands (better) the people/the majority of the people
- 0172 Doesn't listen to/understand the needs and wants of the people/the majority of the people
- 0173 Campaign tactics, uses too much money in campaigns, slings mud
- 0197 Other party-characteristic reasons

CANDIDATE ONLY -- EXPERIENCE, ABILITY

- O201 General reference to him as "a good/bad man or a good/bad guy"; R has heard good/bad things about him; qualifications; general ability; reference to his "personality"
- 0211 Experienced (NA what kind) (see 0217, 0218 0220 for specific kinds of experience; if in foreign policy see 1100's)
- 0212 Inexperienced
- O213 Dependable/Trustworthy/Reliable; a man you can trust with the responsibilities of government ("trust" in the capability sense; rather than the honesty sense)
- O214 Undependable/Untrustworthy/Unreliable; a man you can't trust with the responsibilities of government
- 0215 A military man; a good military/war record
- 0216 Not a military man; bad military/war record; no military/war record
- 0217 His record in public service; how well he's performed in previous offices; voting record in Congress
- 0218 Has government experience/political experience/seniority/incumbency
- 0219 Lacks government experience/political experience
- 0220 A statesman; has diplomatic experience
- 0221 Not a statesman; lacks diplomatic experience
- 0222 "He has done a good job so far"; He has brought us through hard

- times"; has gotten things done; has some good ideas; trying to do right things
- 0223 Hasn't done anything; hasn't produced any results (general); has not been able to get programs off the ground
- 0224 Has fulfilled/kept (campaign) promises
- 0225 Has not fulfilled/kept (campaign) promises
- 0297 Other candidate experience/ability reasons

CANDIDATE ONLY -- CANDIDATE LEADERSHIP QUALITIES

- 0301 Dignified/has dignity
- 0302 Undignified/lacks dignity
- 0303 Strong/decisive/self-confident/aggressive; will end all this indecision
- 0304 Weak/indecisive lacks self-confidence/vacillating
- 0305 Inspiring; a man you can follow; "a leader"
- 0306 Uninspiring; not a man you can follow; not a leader
- 0307 People have confidence in him
- 0308 People don't have confidence in him
- O309 Good at communicating with blacks, young people, other "problem" groups
- 0310 Bad at communicating with blacks, young people, other "problem" groups (if communicate in general see 0441, 0442)
- 0311 Knows how to handle people (at personal level)
- 0312 Doesn't know how to handle people (at personal level)
- O313 A politician/political person; (too) much in politics; a good politician; part of Washington crowd; politically motivated; just wants to be reelected
- O314 Not a Politician; not in politics; above politics; a bad politician
- 0315 Independent; no one runs him; his own boss
- 0316 Not independent; run by others; not his own man/boss
- 0317 Humble; knows his limitations; doesn't pretend to know all the answers
- 0318 Not humble enough; too cocky/self-confident
- 0319 (Too) Careful/Cautious/Good judgment
- 0320 (Too) Impulsive/Careless/Bad/Poor judgment
- O321 Helps People in the district on a personal level; has helped R personally with a problem (specific mention); tries to do things for the people
- O322 Doesn't help people in the district on a personal level; was not helpful to R with a personal problem (specific mention).
- O323 Represents (well) the views of the district; close to people in the district; comes home regularly to chat and mix with people
- O324 Does not represent (well) the views of the district; not close to the people in the district; doesn't interact enough with the people
- O325 Keeps people well informed about governmental matters; communicates with constituents; any mention of R receiving newsletters or communications
- from him/her; explains well matters so people can understand

 Does not inform people enough about governmental matters; does not send enough newsletters or communications; doesn't explain well
- O327 Listens to the people/solicits public opinion; any mention of polls or questionnaires; is accessible to constituents (NFS)
- O328 Doesn't listen to the people/does not solicit public opinion; isn't accessible to constituents (NFS)
- 0329 Has helped local (district) economy; brought money, projects, job

```
to district
0330
       Has not helped local (district) economy; not brought money,
       projects, job to district
0331
       Candidate helps the district; watches out for the interests of the
       district or region in general
0332
       Candidate has not protected/watched out for the interests of the
       district (specific mentions)
0397
       Other candidate leadership reasons
              CANDIDATE ONLY -- PERSONAL QUALITIES
0401
       Honest/Sincere; keeps promises; man of integrity; means what he
       says; fair; not tricky; open and candid; straightforward;
       positive Playboy references -
0402
       Dishonest/Insincere; breaks promises; no integrity; doesn't mean
       what he says; tricky; not open and candid, not straightforward
0403
       Man of high principles/ideals; high moral purpose; idealistic (if
       too idealistic, code 0416)
0404
       Lacks principles/ideals
0405
       Racist/Bigoted/Prejudiced
0406
       Not a racist/bigoted/prejudiced
0407
       Public servant; man of duty; conscientious; hard-working; would be
       full-time President; good attendance record in Congress;
       dedicated; genuinely interested in serving people
0408
       Does not take Public service seriously; lazy; would be a part-time
       President; poor attendance record in office; not dedicated; not
       really interested in serving people
0409
       Doesn't use office for personal benefit; not in office to maximize
       personal benefit
0410
       Uses/in office (mostly) for personal benefits (junket trips, big
       salary, other perks)
0411
       Patriotic
0412
       Unpatriotic
0413
       Understands the nation's/district's problems; well-informed;
       studies up on issues
0414
       Doesn't understand the nation's/district's problems; poorly
       informed; doesn't study up on issues
0415
       Realistic
       Unrealistic; too idealistic; (if "idealistic" in positive sense,
0416
       code 0403)
0417
       Uses common sense; makes a lot of sense;
       pragmatic/practical/down-to-earth
0418
       Not sensible; impractical
0419
       (Too) Well educated; scholarly
0420
       Poorly educated; unschooled
0421
       Intelligent/Smart
0422
       Unintelligent/Stupid/Dumb
 0423
       Religious; "moral" (in religious sense); God-fearing; "too"
       religious
 0424
       Irreligious; "immoral" (in religious sense); Playboy interview
       (reflects on Carter)
 0425
       Self-made; not well off; started out as poor; worked his way up;
        (started out) unpolished/unrefined/rough
 0426
       Wealthy rich; born with silver spoon in mouth;
       polished/refined/well mannered
 0427
       Old hat; has run before; a die-hard; "a loser" (in the past)
 0428
       Someone new; a fresh face
 0429
       Don't change horses in midstream
 0430
       Time for a change
```

```
0431
     Unsafe/Unstable; dictatorial; craves power; ruthless
0432 Safe/Stable
0433 Sense of humor; jokes a lot (too much)
0434 No sense of humor; humorless (too serious)
0435 Kind/Warm/Gentle
0436 Cold/Aloof
0437 Likeable, gets along with people, friendly, outgoing
0438 Not likeable, can't get along with people
0439 Democratic (in non-partisan sense)
0440 Undemocratic (in non-partisan sense)
0441 High-fallutin'/High-brow; talks in circles, can't talk to common
      man; can't communicate ideas well
      Not high-fallutin'/is low-brow; talks straight; can talk to
0442
      common man; can communicate ideas well
0443
     Well-known; "I know him/her"
0444 Unknown/Not well known
0445 Reference to his family (not 0457) (including "Billygate")
0446 Reference to his w /spouse
0447 Speaking ability
0448 Health
0449 Appearance/Looks/Face/Appearance on TV; his smile
0450 Age (NA how perceived)
0451 (Too) Old
0452
      (Too) Young
0453 Mature
0454
     Immature
0455 Regional reference; "he's a Southerner"; "he's a Midwesterner";
      he comes from the country/a rural area; area reference
0456 Previous occupation; "Carter's a farmer"
0457 He's a family man
0459 Energetic; too energetic
0460 Not energetic
0461 Gender, e.g., "She's a woman"
     Racial/Ethnic attribute; "He is a black man"
0462
0495 Other negative personal qualities
0496 Other positive personal qualities
0497 Other candidate personal qualities
0498
      References to Playboy interview - NA direction or neutral; "it's
      OK," "that is what the Bible says" (not 0401)
                 CANDIDATE ONLY -- PARTY CONNECTIONS
0500
       A Democrat; good Democrat; typical Democrat
0501
       A Republican; good Republican; typical Republican
0502
       Controlled by party regulars/bosses, machine
       Not controlled by party regulars/bosses
0503
0504
       Reference to men around him/staff/followers
0505
       Reference to his speeches (except 0447), campaign tactics;
       mud-slinging
0506
       Can win; best choice for party victory
0507
       Cannot win; not good choice for party victory
0508
       Reference to linkage with other party figures (he's close to the
       Kennedys, he was close to Eisenhower, etc.)
0509
       Would continue/keep/follow Democratic policies (unspecified)
0510
       Would change/get rid of "
0511
       Would continue/keep/follow Democratic domestic policies
       (unspecified, not codeable in 0900's)
0512
       Would change/get rid of "
0513
       Would continue/keep/follow Democratic foreign Policies
        (unspecified, not codeable in 1000's)
```

0514 Would change/get rid of " Would continue/keep/follow Republican Policies (unspecified) 0515 0516 Would change/get rid of " 0517 Would continue/keep/follow Republic domestic Policies (unspecified, not codeable in 0900's) 0518 Would change/get rid of " 0519 Would continue/keep/follow Republican foreign policies (unspecified, not codeable in 1000's) 0520 Would change/get rid of " 0531 More liberal than most Democrats; a Northern Democrat 0532 More conservative "; a Southern Democrat 0533 More liberal than most Republicans; an Eastern Republican 0534 More conservative "; a Midwestern/Western/Southern Republican 0535 Will bring in/listen to the (party) liberals 0536 Will bring in/listen to the (party) conservatives 0541 Reference to the Eagleton affair 0542 Reference to vice-presidential incumbent/candidate, running mate (pre. 1980; reference to Agnew) 0551 References to link with "Watergate" -- positive reference to Watergate 0552 Not associated with "Watergate" -- negative reference to Watergate; making too much out of Watergate Ford's pardon of Nixon -- NA direction or against pardon 0553 0554 " -- pro; brave/right thing to do 0555 Positive references about Anderson's independent candidacy; maybe the country needs a third party, third parties should have more recognition; the two party system needs bucking Negative references/liabilities related to Anderson's independent 0556 candidacy; "he's an independent" (NFS); "we don't need a third party"; "he lacks backing from a party" -0597 Other candidate party connection reasons PARTY OR CANDIDATE ~ GOVERNMENT MANAGEMENT 0601 Good/Efficient/Businesslike administration; balance budget; lower/wouldn't increase national debt; cautious spending 0602 Bad/Inefficient/Unbusinesslike administration; wasteful; "bureaucratic"; deficit budget; higher/increased national debt; overspend 0603 Honest government; not corrupt; no "mess in Washington" 0604 Dishonest/Corrupt government; "mess in Washington"; immorality in government; reference to Hayes, Mills; Lance 0605 (Would) Spend less (than other side); (would) spend too little (Would) Spend more (than other side); (would) spend too much 0606 0607 Has brought/Will bring about bureaucratic reform 0608 Has not brought/Will not bring about bureaucratic reform 0609 General assessment of fob he/they would do/are doing; is good/bad President; prior are providing good/bad administration 0610 Reference to management/performance in Congress/Supreme Court/other government agency 0611 He has/has not worked well with (Democratic) Congress; would/could have done better with (Republican) Congress; he kept/would keep Congress in check 0612 He will work well/better with Democratic Congress 0613 Gets more done/accomplishes more/more productive 0614 Gets less done/doesn't accomplish as much/less productive 0615 Sympathy/understanding expressed for the complexity/magnitude of the job (e.g. President): tough job 0616 Sympathy/understanding expressed for the difficult situation ("a

mess") inherited by the incumbent

- 0617 Will face (difficult) issues; faces problems directly; faces up to political reality
- 0618 Will not face (difficult) issues; will not face problems directly; ignores political reality
- Other government management reasons

PARTY OR CANDIDATE -- MISCELLANEOUS

- 0701 Just like him/them (NA why); like everything about him/them; "I was hoping he prior would win the (nomination/primaries")
- 0702 Just dislike/Don't like him/them (NA why); don't like anything about him/them
- 0703 Will save America; America needs him/them -
- 0704 Will ruin America; last thing America needs
- 0705 Will unite Americans/bring people together
- 0706 Will divide Americans/drive people apart
- O707 Speaks of party/candidate as good protector(s); will know what to do; more intelligent
- 0708 Speaks of party/candidate as bad protector(s); won't know what to do
- O709 Good for country (unspecified); trying to do good job; trying; not just out for self/own best interest; has/have country's interests at heart
- 0710 Bad for country (unspecified); don't have country's interests at heart; only looking out for their own interests
- 0711 Lesser of two evils
- 0719 Reference to Chappaquidick; Kennedy's personal problems
- 0720 Reference to Watergate affair
- 0721 The way the incumbent came to office; the people should select President
- 0722 The incumbent should have a chance (on his own)/another chance/second chance
- 0723 (I believe in/Necessary for a)two-party system; choice between candidates; opposition; balances power of other party
- O724 Vote for the man rather than party; look for more qualified man; don't pay attention to parties
- 0725 The opponent who the candidate ran against; the candidate was the better of the two in general; the candidate ran against someone I really dislike
- 0796 References to unfair/undeserved/excessive criticism by media or public
- Other miscellaneous reasons; other miscellaneous reasons relating to image and candidate/party effect on nation
- 0726 Splits votes; will elect wrong candidate, "spoiler"
- 0737 Expression of sympathy/admiration for the candidate's underdog position; trying hard against terrible odds, courageous uphill battle; "I like underdogs"; "they are bucking the guy" (Keeping him off ballot, not taking him seriously, not giving him enough publicity)
- 0728 Negative comments about the candidate's switching parties, being a turncoat, disloyal to his original party

PARTY OR CANDIDATE -- GOVERNMENT ACTIVITY/PHILOSOPHY

- 0801 General assessment of ideas/policies/stands (specified)
- 0802 Different from other party/candidate
- O803 Same as other party/candidate; not different enough issues (Too) negative; always tearing town other site; no solutions of his/they're Cloned
- 0805 For government activity; believe government should take care of

- things; for big government; supports social programs/spending (not 905-907)
- O806 Against government activity; believe government involved in too many things; favors reduction in social programs/spending (not 905-907)
- 0807 Humanistic; favor human beings over property rights
- 0808 Not humanistic; favor property rights over human beings
- 0809 Favor social change/reform/progress/improvement of social conditions
- 0810 Against social change/reform/progress/improvement of social conditions
- 0811 Socialistic
- 0812 Anti-socialistic
- 0813 Communistic/soft on Communism/apologist for Communists/dupe
- 0814 (Too) anti-Communist/hard-liner on Communism
- 0815 (Too) liberal (except 0531 or 0533)
- 0816 (Too) conservative (except 0532 or 0534)
- O817 Moderate/middle of the road/for slow change; not an extremist/fanatic
- 0818 Extremist/fanatic/too far out; not too moderate/not a fence-sitter
- O819 Pro Far Right/Birchers/reactionaries; encouraging fascist/police state
- 0820 Anti " " ; discouraging
- O821 Pro Far Left/radials/Yippies/SDS; encouraging anarchy/guerilla state
- 0822 Anti " " " " ; discouraging
- 0823 Pro Extremists (NA direction)/nuts/bomb-throwers
- 0824 Anti " " " "
- 0827 Pro States'/local/Community Rights; better local government
- 0828 Anti " "; worse/weaker local government
- O829 For equality; believe everyone should have things equally/be treated equally
- O830 Anti-equality; believe some people should have more than others/people should not be treated equally
- 0831 Generous, compassionate, believe in helping others
- 0832 Selfish, only help themselves
- O833 Acceptance of change/new ideas; less bound to status quo, more open to new ideas/ways of doing things; flexible, innovative
- O834 Resistance to change/new ideas; stick to (protect) status quo, resist new ways of doing things; rigid
- O835 Has a well-defined set of beliefs/definite philosophy; does not compromise on principles; has (clear) understanding of goals they stand for
- O836 Has poorly defined set of beliefs; lacks a definite philosophy; compromise on principles; has no (clear) understanding of goals they stand for
- O837 Favors work ethic; believes in self-reliance/in people working hard to get ahead
- Doesn't favor work ethic; believes in people being handed things/in government, handouts (If specific policy mentioned, code in 900's)
- 0841 Keep track of/control over administration heads, cabinet members, etc.; follow through on policies; determine if programs are working 0842 Don't (as in 0841)
- Os43 Conditional evaluation: R suggests candidate/party cannot solve problems because not under his/their control (no negative connotations); will he/they be able to do what they say (determining factor outside his/their control); "I like what he says but wonder if he can do it" (if

- 97. Other group; combinations not codeable above
- 98. DK
- 99. NA; NONE; "American"

AS IN 1978, THE 1970 CENSUS OCCUPATION CODE IS USED FOR THE 1980 ELECTION STUDY, INSTEAD OF THE CPS POLITICAL BEHAVIOR OCCUPATION CODE WHICH APPEARS IN PAST ELECTION STUDIES, AND USES THE 1960 CENSUS CLASSIFICATION SCHEME AS BACKBONE FOR ITS STRUCTURE. THERE IS A CLOSE CORRESPONDENCE BETWEEN THE TWO CODING SCHEMES. GROUPINGS OF OCCUPATIONS INTO MAJOR OCCUPATIONAL CATEGORIES ARE BASICALLY IDENTICAL FOR BOTH SCHEMES; SOME DIFFERENCES OCCUR IN THE DETAILED CODES WITHIN CATEGORIES.

THE USER WHO NEEDS MORE DETAILED INFORMATION SHOULD CONSULT: U.S. BUREAU OF THE CENSUS, "1970 OCCUPATION AND INDUSTRY CLASSIFICATION SYSTEMS IN TERMS OF THEIR 1960 OCCUPATION AND INDUSTRY ELEMENTS," BY JOHN A. PRIEBE, JOAN HEINKEL, AND STANLEY GREENE (TECHNICAL PAPER 26), U.S. GOVERNMENT PRINTING OFFICE, WASHINGTON D.C., 1972.

IN ADDITION, IN 1978 THE DUNCAN SEI AND NORC PRESTIGE SCORES ARE INCLUDED. IN PAST STUDIES THE DUNCAN SCORE WAS BASED ON 1960 CENSUS CODES; IN THE 1978, 1980 AND 1982 STUDIES A VERSION BASED ON THE 1970 CENSUS IS GIVEN. FOR DETAILS, SEE DAVID L. FEATHERMAN, MICHAEL SOBEL AND DAVID DICKENS, "A MANUAL FOR CODING OCCUPATIONS AND INDUSTRIES INTO DETAILED 1970 CATEGORIES AND A LISTING OF 1970-BASIS DUNCAN SOCIOECONOMIC AND NORC PRESTIGE SCORES," (WORKING PAPER #75-1, CENTER FOR DEMOGRAPHY AND ECOLOGY, THE UNIVERSITY OF WISCONSIN--MADISON).

BOTH DUNCAN AND NORC SCORES ARE BASED ON AN OCCUPATIONAL RANKING SCHEME. BOTH ARE THREE-DIGIT SCORES WITH A DECIMAL POINT TO BE UNDERSTOOD IN THE RIGHT-MOST COLUMN. THE DECIMAL POINT DOES NOT APPEAR IN THE DATA OR DICTIONARY. A SCORE OF 241, THEREFORE, SHOULD BE READ AS 24.1.

U.S. DUNCAN NORC

>> 1970 Census Industry Code

1970 CENSUS INDUSTRY NOTE

THIS NOTE IS USED IN CONJUNCTION WITH VARIABLES WHICH IDENTIFY THE INDUSTRY IN WHICH THE RESPONDENT, THE HEAD OF HOUSEHOLD, AND WIFE OF HEAD OF HOUSEHOLD WORK (ED).

THE INDUSTRIAL CLASSIFICATION SCHEME USED IN THE 1978, 1980, AND 1982 STUDIES IS BASED ON THE 1970 CENSUS CODING SYSTEM, WHEREAS THE 1972 AND 1974 STUDIES USED THE 1960 CENSUS INDUSTRIAL CLASSIFICATION SYSTEM. THE DIFFERENCE BETWEEN THE TWO VERSIONS IS NEGLIGIBLE AT THE LEVEL OF MAJOR CATEGORIES, ALTHOUGH DIFFERENCES EXIST IN THE DETAILED CODES WITHIN CATEGORIES.

THE USER WHO NEEDS MORE DETAILED INFORMATION ABOUT THE COMPARABILITY OF THE TWO CODING SYSTEMS SHOULD CONSULT: U.S. BUREAU OF THE CENSUS, "1970 OCCUPATION AND INDUSTRY CLASSIFICATION SYSTEMS IN TERMS OF THEIR 1960 OCCUPATION AND INDUSTRY ELEMENTS," BY JOHN A. PRIEBE, JOAN HEINKEL, AND STANLEY GREENE (TECHNICAL PAPER 26), U.S. GOVERNMENT PRINTING OFFICE, WASHINGTON D.C., 1972.

ALLOCATION CATEGORIES

- 029. AGRICULTURE, FORESTRY, AND FISHERIES -- ALLOCATED
- 058. MINING -- ALLOCATED
- 078. CONSTRUCTION -- ALLOCATED
- 267. MANUFACTURING, DURABLE GOODS -- ALLOCATED
- 399. MANUFACTURING, NONDURABLE GOODS -- ALLOCATED
- 499. TRANSPORTATION, COMMUNICATIONS, AND OTHER PUBLIC UTILITIES -- ALLOCATED
- 599. WHOLESALE TRADE -- ALLOCATED
- 699. RETAIL TRADE -- ALLOCATED
- 719. FINANCE, INSURANCE, AND REAL ESTATE -- ALLOCATED
- 767. BUSINESS AND REPAIR SERVICES -- ALLOCATED
- 799. PERSONAL SERVICES -- ALLOCATED
- 817. ENTERTAINMENT AND RECREATION SERVICES -- ALLOCATED
- 899. PROFESSIONAL AND RELATED SERVICES -- ALLOCATED
- 947. PUBLIC ADMINISTRATION -- ALLOCATED

AGRICULTURE, FORESTRY, AND FISHERIES

- 017. AGRICULTURAL PRODUCTION
- 018. AGRICULTURAL SERVICES, EXCEPT HORTICULTURAL
- 019. HORTICULTURAL SERVICES
- 027. FORESTRY
- 028. FISHERIES

MINING

- 047. METAL MINING
- 048. COAL MINING
- 049. CRUDE PETROLEUM AND NATURAL GAS EXTRACTIONS
- 057. NONMETALLIC MINING AND QUARRYING, EXCEPT FUEL

CONSTRUCTION

- 067. GENERAL BUILDING CONTRACTORS
- 068. GENERAL CONTRACTORS, EXCEPT BUILDING
- 069. SPECIAL TRADE CONTRACTORS
- 077. NOT SPECIFIED CONSTRUCTION

MANUFACTURING

DURABLE GOODS

- LUMBER AND WOOD PRODUCTS, EXCEPT FURNITURE
- LOGGING
- 108. SAWMILLS, PLANING MILES.

 109. MISCELLANEOUS WOOD PRODUCTS

 EXTRIBES SAWMILLS, PLANING MILLS, AND MILL WORK

STONE, CLAY, AND GLASS PRODUCTS

- 119. GLASS AND GLASS PRODUCTS
- CEMENT, CONCRETE, GYPSUM, AND PLASTER PRODUCTS 127.
- 128. STRUCTURAL CLAY PRODUCTS
- 137. POTTERY AND RELATED PRODUCTS
- 138. MISCELLANEOUS NONMETALLIC MINERAL AND STONE PRODUCTS

METAL INDUSTRIES

- 139. BLAST FURNACES, STEEL WORKS, ROLLING AND FINISH-ING MILLS
- OTHER PRIMARY IRON AND STEEL INDUSTRIES 147.
- 148. PRIMARY ALUMINUM INDUSTRIES
 149. OTHER PRIMARY NONFERROUS INDUSTRIES
- 157. CUTLERY, HAND TOOLS, AND OTHER HARDWARE
- 158. FABRICATED STRUCTURAL METAL PRODUCTS

- 159. SCREW MACHINE PRODUCTS 167. METAL STAMPING 168. MISCELLANEOUS FABRICATED METAL PRODUCTS
- NOT SPECIFIED METAL INDUSTRIES 169.

MACHINERY, EXCEPT ELECTRICAL

- ENGINES AND TURBINES 177.
- FARM MACHINERY AND EQUIPMENT 178.

>> CITIES WITH POPULATION OF 25,000 OR More Revised 7/82

This list was developed from the 1973 World Almanac and Book of Facts, pp. 152188 (1970 population figurer).

The first four digits are a unique code number for each city.

The fifth digit in the urbanicity code for each city, as used in the 1971 quality of Life study (468110).

- 2 = city of over 25,000 and up to 250,000 in an SMSA of 1,000,000or more
- 3 = city of under 25,000 in an SHEA of 1,000,000 or more
- 4 = city of over 250,000 and up to 1,000,000
- 5 = city of over 50,000 and up to 250,000 not in SMSA of 1,000,000
- 6 = city of 50,000 or less not in SMSA of 1,000,000 or more
- 9 = NA

* Place added in 1982 (having population of 25,000+ in 1980 census) coded on basis of 1970 status in area. (see example Chandler, Arizona-it's SMSA was not over one million in 1970, so coded 6 here. This was done to avoid glaring inconsistencies in adjacent areas. The areas affected by this decision are the four places where the population of the SMSA topped the one million mark between 1970 and 1980 (Phoenix, Arizona; San Antonio, Texas; Ft Lauderdale/Hollywood, Florida; Sacramento, California).

>> 1982 FIPS STATE AND COUNTY NOTE

This Note is used in conjunction with variables which record the county of the interview. The first 2 digits of this variable contain the FIPS state code; the last 3 digits contain the county code. Each list of counties for a particular state is proceeded by the 2 digit state code and the name of the state. This information was obtained from: U.S. Bureau of the Census, County and City Data Book, 1972.

>> 1982 CANDIDATE LIST - CATI INTERVIEWS

This is the list of candidate names used in the administration the ISR and BERKELEY CATI interviews. Each cluster is headed by a line containing a three digit code which is the Telephone Cluster Identification Number documented in the codebook as v4. Correct pronunciation of the candidate name was inserted where necessary to insure consistent pronunciation and appears here < >. In the field identifying the candidate's partisan affiliation the following party abbreviations are used:

DEM=Democratic
REP=Republican
CON=Conservative
LIB=Liberal
RTL=Right to Life
IND=Independent
D-L=Democratic and Liberal
R-C=Republican and Conservative
DRL=Democratic and Republican and Liberal

MEANING OF FIELDS

COL 1: TYPE OF RECORD (1=HOUSE/2=SENATE/3=GOVERNOR)

COL 2 : SEQUENTIAL CO NUMBER WITHIN CLUSTER

COL 3-4 : ICPSR STATE COOK

COL 6-7: STATE ALPHABETIC ABBREVIATION

COL 9-10: ACTUAL CONGRESSIONAL DISTRICT NUMBER

COL 12: CANDIDATE GENDER (1=MALE/2=FEMALE)

COL 15-16: FUNCTIONAL CANDIDATE CODE

COL 19-54: CANDIDATE NAME

COL 55-57: PARTY OF C COL.65-80: STATE NAME

>> ALTERNATIVE APPROACHES TO SURVEY DATA COLLECTION FOR THE NATIONAL ELECTION STUDIES:

A Report on The 1982 NES Method Comparison Project

by J. Merrill Shanks Maria Sanchez, and Betsy Morton

Submitted to Warren E. Miller, Principal Investigator and

The NES Board of Overseers INITIAL VERSION March 15, 1983

OUTLINE

INTRODUCTION: THE NES RATIONALE FOR CATI AND METHOD COMPARISON

Potential Advantages of Telephone Surveys for Electoral Research

Method Comparison and CATI Evaluation Issues

- Differences in sample or measurement quality Instrument complexity and new measurement formats Comparability with NES time series

- Sample size, interview length, and data collection costs DESIGN AND GOALS FOR THE 1982 METHOD COMPARISON PROJECT

Immediate Analytic Objectives

- -- Univariate differences between methods
- -- Differences in coverage, completion, and measurement
- -- Differences in relationships between variables
- -- Identifying congressional districts
- -- "House effects": Differences between CATI operations Testing for differences: A Note on Statistical Procedure

A SUMMARY OF INITIAL RESULTS

Sample outcomes and response rates for the three projects
Modest (but significant) differences in social characteristics
Consistent differences in opinionation or involvement
Modest (but inconsistent) differences in political attitudes
Measurement differences and relationships between variables
Alternative ways to identify congressional districts

GENERAL CONCLUSIONS AND RECOMMENDATIONS

General similarity or comparability between the two methods
The importance of maintaining personal and telephone methods
The need for continuing analysis and experimentation on cost
quality tradeoffs for alternative data collection procedures
Organizational issues: Staffing implications of growing
technical complexity; and alternatives for large sample designs

INTRODUCTION

Since the discussions which led eventually to the initial proposal for the National Election Studies, no single subject has taken more time within the NES community than the appropriateness of alternative survey designs based on telephone methods — and the potential advantages and/or disadvantages associated with the newer systems for computer-assisted telephone interviewing (or CATI). This general interest first came sharply into focus in 1978-79, during the Board's deliberations concerning the most efficient way to study the primary election period before the 1980 presidential nominating conventions. The Board's 1980 Committee ultimately chose to recommend against using telephone-based methods for

any of the major design elements for that election, because of uncertainty in the areas to be discussed below. But many of the same issues also arose in the Board's discussions of alternative approaches to research on congressional elections, based on analytic limitations imposed by the sample design used in NES' otherwise successful study of the 1978 election.

Issues concerning the design and/or data quality tradeoffs associated with telephone vs. conventional survey methods -- and the new (but still uncertain) potential of computer-assisted systems for data collection -- have therefore been central to Board deliberations throughout NES' short history as a national research facility. In 1982, these issues culminated in a Board decision to sponsor a direct comparison between the two methods in conjunction with the regular 1982 study. Although the initial results of that study were not available until mid-February of 1983, they have already influenced many of the Board's decisions concerning NES data collection plans for 1984. Analyses of the complex set of method comparisons made possible by the 1982 project will no doubt continue for some time, both within the Board and staff and in the larger NES research community, and the results of those analyses will structure Board deliberations concerning alternative designs throughout the next grant period.

The purpose of this report is to review the background and or rationale for the 1982 Method Comparison Project, and to summarize those initial results from the Project which bear directly on the feasibility and cost-effectiveness of the new survey techniques. We also hope to encourage other researchers to exploit the (unique) methodological data produced by the project, for this report represents only the first step in what should become a continuing program of research and development on telephone- and CATI-based techniques. As we will argue, much remains to be done before NES can take full advantage of the new survey techniques involved.

Potential Advantages

In its 1983 proposal to the National Science Foundation, the NES Board has identified those substantive areas where NES surveys are likely to depart from prior studies, based on recommendations from active scholars who use NES materials on a continuing basis. In specifying the research objectives which the Board has given a high priority for the mid-1980's, the proposal also emphasizes the method- or design-related implications of several recommendations, for they would require an at least partial shift to telephone-based methods. In general, recommendations of this sort -- that NES utilize telephone surveys and/or computer-assisted systems -- cite one or more of the following potential advantages of the new techniques:

- 1. With telephone-based techniques, it may be possible to achieve a major reduction in cost per interview or a major increase in sample size, through some combination of lower interviewing costs on the telephone and greater production efficiency through the use of computer-assisted telephone interviewing (CATI);
- 2. CATI systems make it possible to use more complicated survey instruments or measurement procedures, based on computer-assisted branching, cycling, and automatic modification of question content;
- 3. CATI may minimize the amount of error involved in survey data through "online" verification and/or edit checking;
- 4. Both centralized telephone interviewing and CATI may make it easier to control (or schedule) the administration of NES instruments to independent national samples in relatively short periods of time, in order to provide a

Time sensitive. design for assessing the impact of campaign-related and other political events; and

5. Both telephone methods and CATI should facilitate the administration of NES instruments to specific sub-national constituencies (such as deliberately selected states and/or congressional districts), for which the traditional NES national sampling frame and interviewing staff is impractical.

As discussed more fully in the 1983 NES proposal, the above data collection objectives have played a central role in discussions about a wide variety of future NES research objectives. Prior to 1982, however, the Board and staff were reluctant to commit significant data collection resources to the new techniques involved because of general uncertainty about the consequences of such a decision, and because of specific concerns about the tradeoffs between cost, sample size, and data quality involved.

Possible Problems or Methodological Issues

In particular, Board discussions about telephone interviewing have for some time reflected the following concerns or reservations:

- 1. Telephone-based methods might lead to a loss in sample quality, based on a combination of non-coverage (of citizens living in households without telephones) and the potential for lower response rates in telephone surveys.
- 2. Host observers have shared a belief that the average length of telephone interviews cannot be extended to the 60 to 70 minutes required to cover the traditional NES content.
- 3. Many researchers have also been concerned about the absence of show cards and other visual displays in telephone interviews. NES instruments have made extensive use of such aids, so that telephone methods might lead to losses in comparability or data quality vis a vis the traditional (face-to-face) interviews. It was also recognized that in principle CATI systems might compensate for the loss of visual aids by reformulating questions into complex sequences which take advantage of automatic "branching", but no evidence existed concerning the effectiveness of such compensating capabilities for NES-type items.
- 4. Telephone surveys based on national samples produced by random digit dialing may not be feasible for research objectives which require that each interview be assigned to a particular congressional district before substantive questions begin.
- 5. The use of telephone-based surveys for studies which need probability sampling, high response rates, and long interviews is relatively new. As a result, information presented to the Board about the relative costs of telephone vs. traditional methods has been inconsistent at best. It has thus been impossible to assess the hard cost-related tradeoffs involved in any design changes for future studies.
- 6. This uncertainty about costs has been compounded with respect to computer-assisted telephone interviewing, for CATI systems themselves -- and detailed NES procedures for using CATI -- were still in an exploratory stage. Thus, even the cost-related results of demonstration CATI projects were difficult for NES to assess, because the operational procedures involved had not reached sufficient popularity to permit stable cost estimates for large scale NES utilization.

During the early 1980's, however, experience with telephone interviewing and

CATI systems within the academic, governmental and private sectors advanced to the point where the new techniques demanded serious consideration by NES. In particular, the Berkeley Program in Computer-Assisted Survey Methods had demonstrated in 1981 that the length of telephone interviews on political topics could be extended to 50-55 minutes, thereby overcoming what had been assumed to be a fundamental barrier to NES use of telephone surveys (See Shanks, et al, 1981). Nevertheless, it was still the case that the concerns about tradeoffs in cost and data quality for NES could not be effectively addressed by reviewing other CATI demonstration or method comparison projects.

DESIGN AND GOALS FOR THE 1982 METHOD COMPARISON PROJECT

For these reasons, the Board decided to commit all of its R&D resources for 1982 to a systematic comparison of the two methods. As originally proposed, the same NES interview schedule would be administered to two independent national random adult samples, one of which would use traditional household sampling and face-to-face personal interviewing, and the other would use an RDD sample of telephone households and computer-assisted telephone interviewing. As the project developed, it was further proposed that the CATI component for the study be equally (and randomly) divided between the two approaches to CATI system design and production data collection being developed at Michigan and Berkeley. Given probable budgetary constraints, the specific goals for these three independent data collection projects were set at 1500 traditional (or face-to-face) interviews, 500 interviews produced by ISR's CATI facility, and 500 interviews produced by CSli's CATI facility.

With both approval and supplementary support from the Foundation, this specific design was carried out during the period following the 19&2 congressional elections. The next section of this report reviews the objectives and procedures used in our first analysis of the resulting data, and the following section highlights the analytic results which have already been presented to the NES Board. A concluding section then provides a brief summary of the lessons so far obtained from the Method Comparison and CATI demonstration aspects of the 1982 study. This discussion includes our own recommendations concerning the methodological and/or technical issues which need further attention before NES can regard the 1982 design as "established" or routine, and a short discussion of the organizational and staffing issues associated with large scale NES utilization of the new (computer-assisted) techniques.

Immediate Analytic Objectives. Given the above set of general goals, answers to preceded questions from the 19&2 survey were processed during the few weeks between the completion of all interviewing activity and the Board's February meeting. As of this writing, coding and editing for open-ended questions and "other specify" were still underway, but method comparisons based on those materials will be incorporated in a subsequent version of this report.

In the following pages, we have summarized our early conclusions from the 1982 Method Comparison Project in six broad categories, dealing with:

- 1. Univariate differences between the traditional and CATI samples, with respect to:
 - -- social and demographic characteristics;
 - -- the existence of political interest and opinion; and
 - -- the direction of political opinions (when present);
- 2. Where possible, univariate differences between methods are discussed in terms of the contributions made by method differences in sample coverage, response rates, and measurement techniques;

- 3. Differences between the traditional and CATI samples in relationships between variables;
 - 4. alternative approaches to congressional district classification;
- 5. "House" effects, based on differences between the Michigan and Berkeley portions of the CATI sample; and,
- 6. the impact of telephone methods and CATI on costs and study organization.

Testing for Differences: A Note on Statistical Procedure.

Previous studies provide some guidance concerning the probable direction and magnitude of any differences which might arise between telephone-based and traditional methods — and the extent to which they may be attributed to differences in coverage, response rates, or measurement (Groves and Kahn, 1979, Freeman, et al, 1982). The NES Board and Staff, however, are primarily concerned with the combined effect of all three of these sources (or types) of "method effects". For this reason, and because the three types of effect cannot always be separated, our initial analyses have been structured in terms of an overall null hypothesis. Thus, we have repeatedly tested the proposition that our traditional and telephone methods produced two independent random samples from the same population, or that each difference between the two 1982 samples can be attributed solely to chance.

As our first, and deliberately exploratory, analytic step, we therefore examined the relationships between type of data collection (personal vs. CATI) and substantive NES variables in each of the three areas mentioned above -i.e. in social or demographic characteristics, in the degree to which respondents expressed political opinions or interest, and in the direction of political attitudes. For each such relationship (between method and substance), we then calculated the apparent probability that a relationship (or a departure from complete independence) that large could have arisen by chance. Since this part of the analysis has necessarily examined a very large number of potential differences between the two methods, our search for differences was carried out on only a random half of the interviews from both samples. In those cases where this exploratory procedure yielded evidence of a difference which is "significant" at the .05 level, the same calculations are then replicated on the second random half of our sample. For those variables where a significant difference persists, we then discuss the degree to which those differences may be due to the three types or sources of method differences -- i.e. to coverage (of non-telephone households), differential completion rates, or differences by mode in the measurement of identical concepts. In some sections, we have re-examined the same relationships after restricting the analysis to those respondents who voted in 1982. Many NES analyses are necessarily limited to the active (instead of the potential) electorate, so it is essential to see if overall method differences persistwhen the sample is restricted in that fashion.

The above split-sample procedure was also used to test for differences between he two CATI-based survey organizations that collected the data. But "methods differences were much more numerous (and significant) than ~house" differences in the 1982 project.

A SUMMARY OF INITIAL RESULTS

All three data collection projects achieved their objectives in terms of

completed interviews, and the final response rates for the three projects were consistent with prior expectations. Thus, 1418 complete or partial interviews were conducted in respondents' houses, for a completion rate of 72%. The Berkeley CATI study yielded 501 complete or partial interviews, the Michigan CATI operation produced 500 complete or partial interviews, and both CATI samples represent a completion rate of 62%. Based on the information now available, all three projects adhered to their design specifications for households and respondent selection, so that the three data sets can be interpreted as independent samples from the same population -- i.e. of adult citizens living in households during the 1982 post-election period. Any differences between the three sampler that cannot be attributed to chance should therefore be attributed to one or more intentional differences in method or procedure, rather than defects in the execution of our basic design.

Method-Related Differences in Social Characteristics.

Out of 11 comparisons, five fixed personal characteristics or demographic variables yielded statistically significant differences between the traditional and CATI samples. These differences in respondent's education, income, race, religion, and region were of course initially detected in an exploratory analysis based on a random half of both samples, but Table A (on the following page) highlights those differences for the total 1982 sample, along with selected results for variables with no method-related differences.

The relationship between data collection method and education is of course familiar from previous studies (Groves and Kahn, 1979, Freeman, ~t Al, 1982). As in other studies, some of this difference can be attributable to the small proportion (approximately 5%) of the population excluded from telephone surveys because they live in households without telephones. Thus, when this "coverage" effect is removed by restricting the traditional(or face-to-face) sample to those respondents who live in telephone households, the magnitude of the educational difference between the two samples is reduced-, but it is still clearly significant. In any production utilization of telephone-based methods, weight variables would presumably be used to correct for differential response rates between areas, and to correct for the disproportionate representation of better educated citizens in telephone samples. But the magnitude of education-related differences should be recognized wherever those weights are used.

Table A METHOD-RELATED DIFFERENCES IN SOCIAL CHARACTERISTICS

Significant :	Differences	Total Personal Interview Sample	Total CATI Sample
Education	Percent with no High School	23.2	16.6
	Percent With College Degree	18.7	24.4
	Number of Cases (Base	N) (1401)	(948)
Race	Percent Black	10.6	5.6
	Percent Non-Black	89.4	94 4
	Number of Cases (Base	N) (1402)	(945)
Household Income	Percent With Income Less Than \$5,000	10.7	4.4
	Percent With Income Greater Than \$35,000	18.8	24.3

	Number of Cases (Base N)	(1246)	(861)
Religion	Percent Protestant Percent With No Preference Number of Cases (Base N)	13.5	51.6 20.9 (954)
Region of Residence	Percent in Northeast	19.8	28.1
1.00 2 0.0110 0	Percent in South Number of Cases (Base N)		33.9 (954)
Non-Signific	ant Differences		
-	Percent With Union Member in Household	21.4	20.0
	Percent Married Living with Spouse	60.0	60.4
Age	Percent Less Than 26 Years	Old 14.1	16.1

The noticeable differences between traditional and CATI samples with respect to race and income present more difficult problems of interpretation, for these effects may be at least partially caused by differences in the conceptualization and measurement of the basic variables involved -- as well as sample-related differences due to non-telephone households and differential response rates. Thus, race was (necessarily) measured through a direct question asked of all respondents on the telephone, while the 1982 NES personal interviews relied on direct interviewer observation. And income was measured on the telephone through a complex series of questions which took advantage of CATI's capability for automatic branching, since the "card" which is used to show income categories to respondents in personal interviews could not be used.

Whatever the cause of these differences, however, it seems important to note that household sampling and face-to-face interviews produced a national sample of the potential electorate in 1982 with nearly twice as many blacks as a comparably sized sample produced by random digit dialing sampling and telephone interviewing. And the 1982 telephone sample under-represented low income families in general -- and included only half as many families with income less than \$5,000 per year.

As in the case of education, these differences can -- and should -- be partially corrected through weight variables which compensate for known under-representation of specific demographic groups. In developing such a weighting procedure, however, our current evidence is less than decisive, for the national data which might be used as a standard for correction are themselves based on different data collection procedures i.e. on interviewer observation or self-administered questionnaires. As discussed below, we recommend that NES continue to support research and development in a variety of telephone-related areas. The whole question of demographic representation and weighting provides a good case in point, for it raises a variety of issues concerning the correct standard for re-weighting both the telephone and the personal interview sample.

Although the representative quality of telephone vs. traditional samples must be judged on the basis of total sample comparisons, it is worth noting that both the education and income differences are much weaker (and in fact fail to obtain statistical significance on a half sample basis) when the analysis is restricted to those who actually voted in 1982. Thus, as in our prior analysis of non-telephone household distinctiveness based on data from the 1980 NES study, the impact of telephone methods on sample composition would appear to be much less for the active (instead of the potential) electorate.

As shown is Table A above, the 1982 CATI sample departed from the 1982 personal interview sample (and previous NES studies) in the proportion of respondents who live in the Northeast and Southern regions of the country. As of this writing, the explanation of this regional difference is not clear, but it appears to stem from the original telephone sample, rather than from differential response rates by region. Regional differences will be removed when the data are weighted, but the weight variable to be used has yet to be developed, and will depend on an extended analysis that has only recently begun. The apparent method-related difference in religious preference was entirely unexpected, and may be a by-product of the regional and educational differences discussed above, As in many other sections of this report, however, further analysis of this difference must await the completion of a weight variable which compensates for known differences in other social characteristics.

In summary, it seems likely that some demographic differences will persist between samples produced by traditional vs. telephone-based methods. But the effects involved are modest in nature, they are to a considerable extent concentrated among non-voters, and they can be largely removed through the utilization of appropriate weights. To reinforce this general conclusion, we have begun to compare the distributions on variables from the traditional NES sample in 1982 with comparable figures from the 1980 census.

Table B

Verna of Cohool	METHOD-RELATED		NCES IF EDUCA Personal 19	ATIONAL ATTAINMENT
Years of School	1980	1982		
Completed		Census	Interviews	Interviews
0-11		32%	23%	17%
4 Yrs High School		36%	34%	36%
1-3 Yrs College		17%	23%	25%
4+ Yrs College		15%	20%	22%
		100%	100%	100%

As shown in Table B. the difference in education between the CATI and traditional NES samples epresents only an extension of an already noticeable discrepancy between traditional NES samples and Census Bureau estimates for the national adult population. In general, even political surveys carried out by academic organizations that use probability sampling and seek the highest possible response rates under-represent citizens with low levels of education and income. In making inferences about the potential electorate, these differences have posed a potential threat to correct inferences about univariate distributions — if not about relationships between variables for some time, and the use of telephone methods would appear to accentuate those difficulties. Were it not for considerations of cost, timing, or geographical location, traditional survey methods (based on household sampling and face-to-face interviewing) would apparently produce a slightly more accurate portrait of the potential electorate. But these method-related differences are generally modest, while the cost differences between the two techniques are not.

Differences in Political Interest and Opinionation. The clearest and most consistent differences between CATI and traditional methods arise when we focus on the extent to which respondents offer opinions on issues, and on the level of political interest or involvement. As before, the magnitude of those

differences is not great, but 21 out of 54 comparisons made in this area between the CATI and personal half samples produced differences which were significant at the .05 level. Most of those differences were again significant in our second half sample, but (perhaps understandably) only seven remained significant when the analysis was restricted to the active electorate. Table C (on the following page) presents five of these comparisons, based on the full 1982 sample for both techniques. We are not yet sure whether the differences in Table C are solely due to the greater ease with which politically uninterested potential respondents can refuse to participate in a telephone interview. It may also be the case that telephone respondents are less willing to admit they "don't know. in response to attitudinal questions, or that probing is more effective on the telephone. But we are tempted to conclude that non-response is more sensitive to low levels of political interest on the telephone than in face-to-face (personal) interviews.

Differences in the Direction of Political Attitudes. For those respondents in both samples who die express an opinion or attitude on NES issue variables, we have also tested the hypothesis that the distribution or balance of opinion is the same in both populations — and then checked to see if significant differences persist when the analysis is restricted to the active electorate. Out of 64 (half sample) comparisons of that sort, only 19 are statistically significant at the .05 level, and 10 of these arc no longer significant when the analysis districted to the active electorate. Table D presents six of these significant differences, along with insignificant differences in ideology and overall approval of Ronald Reagan's performance — in order to illustrate the modest and inconsistent nature of method-related effects in this area.

Ta	b]	.e	C

DIFFERENCES IN	N POLITICAL INTEREST AND OPI Total Personal	NIONATION Total
CATI	Interview Sample	Sample
Percent with No Opinion on Gov't Spending and Services	20.4	14.4
Percent with No Opinion on the Long Term Impact on the Economy of Reagan Policies	18.3	10.3
Percent with No Opinion on the Equal Rights Amendment	7.0	2.5
Percent Who Follow Gov't and Public Affairs "Hardly at All"	14.8	8.6
Percent \W`ho Care "Very Much" About the Outcome of congressional	20.6 Elections	24.5
Number of Cases (Average Base N)	(1400)	(950)

To help us in interpreting these results, we have begun to use summary variables within each category of NES questions, in order to remove some of the idiosyncratic (and/or random) differences between items. In initial analyses, variables which summarize perceptions (traits) and feelings about Ronald Reagan have not shown a significant relationship to data collection

mode, but we are not yet prepared to conclude that "no differences" exist. And we are not yet certain how to summarize sample differences in policy preferences. There are significant differences in individual 7-pt scales, but the direction of those differences is inconsistent. There is no significant difference in overall ideological self-identification, and we have as yet no insights into the role played by sampling and measurement differences between the two techniques.

Table D

DIFFERENCES IN THE DIRECTION OF POLITICAL ATTITUDES

(Base N's are in Parentheses)

		Total Personal Interview Sample	Total CATI Sample
*	Average Score on Ideology (ISR) (1=Liberal, 7=Conservative)	4.3 (888)	4.3 (331)
	Average score on Aid to Minorities (ISR) (1=Favor Aid, 7=Oppose)	4.4 (1186)	4.1 (399)
	Average Score on Gov't Spending (Berkele (1=Cut, 7=Increase)	ey) 3.9 (1115)	4.3 (410)
	Average Score on Gov't Services (ISR) (1=Reduce, 7=Increase)	3.8 (1109)	4.2 (403)
	Average Score on Gov't Jobs Responsibil: (1=Favor, 7=Oppose)	ity (Berkeley) 4.3 (1202)	4.5 (407)
*	Percent Who Approve of Reagan's Performa	ance As Pres. 51.4 (1310)	54.3 (902)
	Percent who Approve of the way Reagan is National Defense	s Handling 55.7 (1198)	61.5 (832)
	Percent who are Strong or Weak Democrat:	ic Identifiers 45.2	37.4
	Percent who are Strong or Weak Republica	an Identifiers 24.5 (1373)	26.0 (940)

 $^{^{\}star}$ Not significant at the .05 level

Based on our results so far, we have concluded that telephone methods yielded

onsistently (and significantly) different distributions in political attitudes only for partisan identification and some party-related evaluations. Both the ISR and Berkeley telephone samples included fewer democrats, and this

[#] Because of the branching experiment, these results are based on either the ISR or the Berkeley half-samples who were asked the questions in the conventional 7-point (non-branching) format.

difference remains when the analysis is restricted to actual voters. As in all other comparisons in this report, we do not yet know whether this sample difference in partisanship will disappear when we re-weight the telephone sample to correct for known differences in demographic characteristics. When appropriate weight variables have been constructed, all of the above analyses will be repeated, so that we can assess the degree to which the two methods produce different results through mechanisms other than the telephone's under-representation of less educated and politically interested citizens.

Measurement-related Differences As discussed above in connection with sample differences in race and income, results of telephone surveys (and CATI studies in particular) may differ substantially from those of traditional surveys because of measurement differences associated with the loss of visual aids. In the case of questions about income and detailed contacts with congressional candidates, this change in instrumentation is unavoidable, and the revised questions for CATI represent only a natural adaptation of the same basic objectives and categories.

In the area of political issues, however, the 1982 project included an additional experiment on the consequences of different approaches to the conceptualization and measurement of both the respondent's position and his perception of the position held by several candidates and parties. By again taking advantage of the random allocation of cases to Michigan or Berkeley, respondents were randomly assigned to one of the two following measurement "treatments."

- -- with respect to ideological position, attitudes towards government services, defense spending, aid to minorities, equality for women, and governmental responsibility for jobs and standard of living:
- 1. In the "traditional" treatment, the "card" used in personal interviews to explain the seven point scale was simply evoked for telephone interviews as part of the question text, and respondents were asked telephone questions which closely followed the traditional NES wording;
- 2. In the CATI or "branching" approach, respondents were first asked a simple trichotomous question concerning their own opinion, and their answer to that question determined the (different) follow-on question used to classify each respondent into one of seven final categories. (The same two stage process was then used to capture respondents' perceptions of candidates and party "positions" on the same policy issues.) In constructing these questions, care was taken to maintain the definition of the end points on the traditional 7 point scale, but the branching format ledinevitably to some changes in the definition of final response categories.

Based on the 1979 NES pilot survey, and subsequent discussions concerning the potential advantages of CATI-type branching, some researchers have anticipated improvement in the accuracy or validity of data on issue positions produced through this multi-stage process. That possibility will be addressed below in our discussion of "Differences in Relations Between Variables", but it also suggests the importance of comparing the overall marginal distributions between the two approaches to measurement. We are therefore using our (random) half samples to test the hypothesis that the branching format produces a systematically different impression of the overall balance of public opinion in each attitude area. Comparisons of this sort will be discussed in greater detail in subsequent versions of this Report, but the following results are already clear:

1. There are no consistent differences between the two methods in their tendency to over (or under) represent one side of the bipolar dimensions

represented by the four NES questions used for this comparison;

- 2. The branching format does reduce the number of respondents who remain at an indeterminate or "middle" position, although it is not yet clear if such a change represents an improvement;
- 3. For whatever reasons, the branching approach maximizes the variation between respondents' in their apparent position on the 7 underlying dimensions, a fact which should be kept mind when interpreting differences between methods in relations between variables;
- 4. We believe that branching results in a noticeable increase in the amount of missing data, possibly because the initial trichotomous question provides more encouragement for respondents to say they "haven't thought much about this" -- but this result has not yet been fully tested; and
- 5. The branching method takes noticeably longer to administer when placements are needed for a substantial number of candidates.

This last point deserves special emphasis, as the Board's 1984 Committee begins its deliberations concerning the multiple design elements for that year. Continuity with previous election studies may well require that the traditional 7-pt scale be continued for the Fall (time series) component of the 1984 study. But branching methods may be attractive for the pre-convention portions of the study unless the instrument calls for "placements" for a large number of candidates. As of this writing, method comparisons in the issue and branching areas have only begun, but future NES Committees may well have to choose between better measures of respondent positions and issue placements for more candidates.

Relationships Between Variables. In our initial -- and exploratory -- comparisons of the CATI and traditional samples, we have also examined the strength of relationships for each method between basic political predispositions and a substantial number of attitudinal or opinion variables. In our results so far, no significant differences have been found between the telephone and traditional samples in bivariate relationships between party identification (and ideology) and several dozen other political variables. There is an inconsistent (and insignificant) tendency for relationships between party identification and specific partisan evaluations to be slightly stronger in the personal interview sample. But this faint tendency is if anything reversed in relationships between ideological self designation and issue position, and we suspect that these preliminary differences are to some extent confounded by the differences between the two samples in levels of education and by the differences between branching vs. 7-pt measures -- as discussed above.

Confirmation (or rejection) of these last possibilities will require further analysis, and these same comparisons may have to be replicated in a subsequent election before we can dismiss sampling error as an explanation, for none of our differences in relationships represent more than a 15% change in the measures of association involved. In summary, our initial results suggest that NES analysts who are primarily interested in relationships between variables need not worry about the impact of telephone-based methods on their results.

Congressional District Classification. Since 1978, NES Board and Committee meetings devoted to research on congressional election have repeatedly dwelled on the potential advantages of telephone surveys for congressional research primarily because of the larger sample size which could be produced. But all parties involved were also concerned about the potential barrier to such an application posed by the initial ambiguity concerning the current

congressional district for households selected through random digit dialing (RDD). Since the instrumentation developed for the 1978 NES study requires that detailed information about the candidates be used to automatically modify all questions about congressional elections, some method had to be found and tested to produce such information before each interview.

For this reason, one of the major objectives of the 1982 Method Comparison study was an assessment of the relative efficiency and accuracy of alternative techniques for assigning randomly selected household telephone numbers to congressional districts. On the basis of extensive staff and Board discussions, it was decided that only a "streamlined" method would be used in 1982, in which congressional districts were simply attributed to each randomly selected household telephone number (where any possibility of ambiguity existed) based on information provided by the respondent -- so that the maximum number of interviews could be conducted with the resources available. In principle, the Board might recommend (and may do so in the future) that interviews involving some ambiguity concerning district identification be interrupted, so that geographic information may be used to identify the district involved before resuming the interview as a callback. This option was not exercised in 1982, both because of the extra costs associated with such a venture, and because detailed geographic maps were not available from the 1981 and 1982 redistricting in time to support such a technique. Instead, the 1982 interviews included questions about the geographic location of the respondent's household, and each case was ultimately associated with a "true" congressional district, based on address information and detailed maps -- but that classification took place after all the interviews were completed. Based on that effort, an analysis is now underway concerning the detailed correspondence between the apparent district (to which each respondent was attributed during the interview) and the actual district which a more careful (but expensive) procedure could (in principle) have established before substantive questioning began.

Before discussing these results, it may be helpful to review what we believe is the major important conceptual and measurement issue before the Board concerning survey measurement in tile congressional area. Based on the data from prior election studies, it has been evident for some time that a substantial proportion of NES respondents are unable to evaluate congressional

candidates, and appear to have very little information about any of the alternatives involved. Nevertheless, previous election studies have maintained the practice of asking all potential voters for their evaluations of the candidates and for evidence of contact with both the incumbent and/or challengers. Thus, a substantial amount of interview time has been used to obtain repeated negative answers like "no contact. or no specific "likes" or "dislikes". Many analysts (and the NES staff) have recommended for some time that screening questions be introduced, so that interviewers would automatically skip all questions about congressional candidates for individuals who fail some minimal standard for candidate visibility. The question of potential comparability between telephone surveys and the traditional NES procedure rests fundamentally on the way in which the Board resolves this question.

In 1982 two different methods were used to identify congressional districts and to select the subsample of respondents for whom detailed congressional questions were asked, and these two methods are directly linked to the two alternative answers to the above general question. In the random half of the telephone (CATI) sample administered by Michigan's Survey Research Center, respondents were "attributed" to a congressional district when the names recalled implied one and only one of the districts possible for that telephone number. At the other extreme, respondents who failed to recognize

any of the major party candidates in any of the congressional districts to which their telephone cluster might belong were not asked any of the congressional questions. When the respondent failed the recall test, but save signs of candidate recognition for one of the congressional districts -- but no such recognition in the other possible districts -- that respondent was automatically "attributed" to the district in which recognition took place and the detailed congressional questions were administered in terms of the candidates in that district. In the approach used at Michigan, only those respondents who had failed the recall test but recognized candidates in more than one district were then explicitly asked to choose between the two or three districts that might be involved. Out of 468 interviews for which the essential information, is currently available, this first (Michigan) method produced a national sample in which 77 respondents (or 16%) were asked no congressional questions because they failed to recognize any of the potential candidates involved. And an additional 7 respondents (or 1%) were not asked the congressional questions because they recognized candidates in different districts, and were unable to resolve the conflict in response to a direct question.

In contrast, respondents interviewed by Berkeley CSM's staff were asked the congressional questions even if they failed to recognize any of the congressional candidates involved if they lived in single district clusters. In multi-district clusters, except in those cases where the respondent was able to select a district through unaided recall, all respondents with telephone numbers for which there was some prior ambiguity about the correct congressional district were asked to make an explicit choice between the multiple districts involved. Thus, "recognition" information was not used to attribute each respondent to a congressional district. As a result of this procedure, out of a total of 443 interviews for which the appropriate information is currently available, no respondents were "skipped" " for the congressional questions because of a failure in recognition, but 66 respondents (or 14%) were not asked the congressional questions because they were unable to select their congressional district in a direct choice between the possiblealternatives. The two methods were also different in the accuracy of the congressional districts assigned to respondents on the basis of their answers to questions. As the following table shows, the method used for Berkeley's half sample permitted a larger proportion of the sample to be asked the congressional questions, and that a higher proportion of the attributions proved ultimately to be accurate. But nearly all of the "gain" in the Berkeley sample (both in the number of respondents asked congressional questions and the accuracy of congressional district attribution) was concentrated in those respondents that were unable to recognize any of the candidates involved. Therefore, if the Board subsequently decides to systematically skip all congressional questions for respondents who are ill-informed about the candidates in their district, the method of "attribution through recognition" used in the ISR half of the 1982 study would be superior.

VERIFICATION AND ASSIGNMENT OF CONGRESSIONAL DISTRICTS Alternative CATI-Based Procedures

	True CD Equals Assigned CD	True CD Does Not Equal Assigned CD	Never Assigned	DC+MD
ISR Method (N=484)	69% (335)	13% (65)	17% (84)	(16)
CSM Method (N=461)	76% (352)	9% (43)	14% (66)	- (18)

In general, it seems clear that the losses or errors in both 1982 methods are heavily concentrated among those respondents who have very little to say when asked the detailed congressional questions. The random assignment of respondents to two different methods of congressional district classification in 1982 does permit us to assess the kind of information lost (or gained) when one method of district attribution is chosen instead of the other. For example, we believe that the Berkeley respondents who were not asked congressional questions because they could not explicitly choose their district had (on the average) very little to say about the candidates involved, so that we expect that the two samples will be nearly identical in the overall "amount" of information collected in response to the open-ended questions about the e congressional candidates. And Berkeley results should make it clear that those respondents who were asked congressional questions (even though they failed to recognize any the candidates involved) had very little to say in response to those questions -- or that the method used at ISR lost very little information by skipping all congressional questions for such respondents.

Differences Between survey Organizations and CATI Systems. Although the questions used in the two CATI-based segments of the 1982 Method Comparison Project were identical, there are differences between the two CATI systems and survey organizations involved. Although the senior staff from both organizations in the 1982 project did not expect any significant differences between results in the Berkeley and Michigan samples, one of the study's major objectives was to test the validity of that expectation. For this reason, all of the comparisons discussed above between traditional and telephone methods have been calculated for the ISR and Berkeley halves of the CATI sample. As before, because so many potential differences were being "tested", only a random half of the two CATI half samples was used for these large scale (and exploratory) comparisons.

In summary, out of 125 potential relationships between specific variables and the "house. or system which collected the data, only 19 differences appear to be significant at the .05 level. These differences, which are not large in substantive terms, involve variables as diverse as length of residence (at both the current address and city), turnout, and the frequency of "don' know. responses to attitude questions. A cursory examination of the content of these variables also suggests a slight difference in socio-economic status and attitudes towards the Reagan administration, but these differences fail to pass a test of significance which takes into account the very large number of tests involved.

Based on our results so far, it seems likely that the two CATI systems and the basic procedures used by the two survey organizations are sufficiently similar to produce national samples which are fairly difficult to distinguish. To some extent, this similarity in results may be due to the standardization in interviewer behavior imposed by the CATI systems and the detailed instrumentation used for the 1982 project. But the two organizations also share a great deal in their approach to interviewer recruitment, training, and supervision. Whatever the cause, however, the new survey technology and methodology can apparently be used to produce similar results in separate organizational settings, despite modest differences between the survey organizations and CATI systems involved.

In a subsequent version of this report, we will present the detailed results of these comparisons between CATI organizations. That presentation will also review the specific areas in which survey practices were known to differ between organizations. As background for that discussion, however, it may be helpful to summarize the major differences between the two organizations and

CATI systems involved. The Michigan Survey Research Center (SRC) has maintained a telephone survey facility and professional staff for several years, but the CATI system used by SRC only recently became available for production utilization. In contrast, the Berkeley Program in Computer-Assisted Survey Methods (CSM) is a research and development group devoted to the creation of new systems and techniques, and does not maintain a production survey capability. The Berkeley system is now in use in several other survey organizations around the country, but the CSM unit maintains staff expertise at only the senior level. As a result, Berkeley's interviewers, supervisors, and coders were recruited specially for the 1982 project, while Michigan's effort relied on a continuing professional staff for these services. These differences should be kept in mind in reviewing both the general similarity and modest differences between the "houses. involved in 1982. And these same organizational differences should be helpful in drawing conclusions from 1982 concerning the probable costs and the staffing requirements for future NES CATI utilization.

Costs and Staffing for Traditional vs. Telephone Methods. Projections for future studies concerning the comparative costs for traditional- and telephone-based methods a re still problematic in several respects. But the budgets and cost information from the 19&2 project, coupled with revised cost estimates for the future, do support some conclusions about the tradeoffs in cost or sample size associated with the two alternative techniques. Thus, after appropriate adjustments have been made for both 1982 cost overruns and future cost reductions based on the lessons and instrumentation from 1982, we believe that the 1982 study will confirm that telephone-based methods can produce more than two (and less than three) times as many interviews (lasting an average of 50 minutes) as can be collected using traditional household sampling and face-to-face interviewing. This ratio of cost and/or sample size could become larger (surpassing three to one) if comparatively short interviews were conducted with those citizens who did not vote in the most recent election. But future planning activities would appear to be on safe ground if they operated within the above range of possibilities.

Even these approximate answers are of course based on a number of operating assumptions and ambiguities, each of which deserve emphasis. In particular, the above estimates are based on the following assumptions

- (a) Both techniques are used to collect fresh (i.e. no reinterview) random adult cross-sections of the nation's eligible electorate, with a sample size between 1500 and 2500. (Smaller studies will drive up the cost per case somewhat differentially between the two methods, but the 1982 experience makes it difficult to assess the comparative startup costs associated with relatively small projects, cue to ambiguities in the division, of labor between the NES study staff and the survey organizations involved)
- (b) The above estimates assume that the basic instrument design (including both theanalysis-ready codebook and instructions for coding open-ended questions as well as the interviewer's instrument) are developed by the study staff or on a separate budget, so that the above estimates reflect only "production" costs associated with sampling, field, coding, and direct data entry
- (c) None of the figures which have gone into the above comparisons incorporate any institutional overhead or indirect costs.
- (d) No attempt has been made to explicitly adjust for the loss in data associated with the shorter length of telephone interviews (e.g. from 70 to 50 minutes).

This last point deserves special emphasis. Although it might be said that telephone interviews "produce" 5/7ths as much information as the single traditional interview, we have not used that fraction to compare the costs per interview or interview equivalent. In many contexts, we suspect that the maximum sample size which can be produced is the more important figure for planning purposes, but it should be noted that the telephone survey will continue to require some sacrifice in the number of questions which can be asked. In this connection, it also seems appropriate to point out that no attempt was made in 1982 to administer a telephone interview which exceeds an average length of 50-55 minutes. Just as the results of 1981 and 1982 CATI surveys have given support to the idea that telephone studies can approach one hour in length, subsequent pilot studies should explore the possibility of even longer interviews, on at least a subsample basis, so that future NES analysts may gain the maximum benefit from each completed interview.

The Impact of CATI. As discussed at the beginning of this report, the 1982 Method Comparison Project was structured in a way which would permit the Election Studies to assess the potential utility of CATI systems as well as telephone-based sampling and interviewing. Thus, the final 1982 data tape will contain cases that were produced by three different systems for the entry, management, and cleaning of survey information. The face-to-face interviews were of course first collected in the traditional paper and pencil form, and then converted to numeric form and cleaned using the Institute's system for direct data entry.

In contrast, the data records from Michigan's telephone sample were created in machine readable form by interviewers using ISR's CATI system, and then converted to use the same procedures used for cleaning and coding the face-to-face interviews. At Berkeley, the (CSM) CATI system was used for all interviewing and coding-cleaning functions, but a special (post-CATI) program was written to convert the resulting data records to precisely match the ISR data and codebook.

These three approaches to survey data processing are different from each other in several respects, so that the 1982 study required a major investment of staff time in both organizations to insure comparability between techniques — and to produce a final codebook which documents the complexities in this multi-method data set. This experience has been extremely instructive in its own right, for it illustrates both the strength and irritations associated with alternative strategies for computer—assisted data collection. During this process, those responsible for the systems involved have obtained new insights concerning ways to save time or improve data quality on complex projects. And the Election Studies staff have gained a much deeper understanding of the issues at stake in long term planning for computer—based survey data collection and documentation.

The detailed CATI "lessons" from the 1982 project, and the different experiences of the two organizations involved will be discussed in a subsequent report. But it is clear that the decision to use CATI, and to simultaneously test two different CATI systems imposed a major additional burden on the staffs and budget for the 1982 project. At this point, it is not yet clear how much of this effort and cost represents an investment in future cost reduction -- and how much must be repeated for each study.

NES decisions with respect to CATI utilization may therefore vary considerably in future studies -- as a function of cost and design requirements. For the design elements proposed for 1984, the NES Board has decided to defer decisions concerning CATI until later in 1983, but all parties concerned are agreed that decisions in this area should be based on the degree to which measurement objectives require CATI-type capability, on the degree to which

CATI offers a clear advantage in the overall cost of data collection, and on the impact of CATI on senior technical staff.

The general implications of the new survey technology for survey organization and staffing have been evident for some time. But the NES 1982 project has provided a powerful independent demonstration of the need for addition"] development and testing of phases, as well as advance planning required calls for a substantial increase in the permanent (senior) technical staff assigned to direct the studies. The two CATI systems used in the 1982 Method Comparison Project were designed in such a way as to save time and costs in the later stages of survey data preparation. But the 1982 project has shown that this expectation will only be realized if sufficient staff expertise and time are available for instrument development at the Front end" of the process, arid if study budgets reflect the complexities associated with the coding of open ended NES Questions and the reformatting of data and documentation for ICPSR distribution.

The NES Board has proposed that future Election Studies include a variety of separate (or independently executed) data collection operations — each of which would require substantial advance planning for full CATI utilization. The full implications of such a change for the permanent staff of the National Election Studies are just now becoming visible, and we urge the staff to proceed carefully, in order to maximize the integrity of each data collection involved while making an orderly transition to the new technology. In general, we recommend that future studies use CATI-type systems only if (or when) they meet the following guidelines:

- 1. CATI should only be used when the system and instrumentation involved have reached a level of technical stability that reduces the overall costs or provides a demonstrable enhancement in the overall quality of the resulting data; or
- 2. When the complexity of instrumentation is such that computer-assisted techniques are essential in order to satisfy the research objectives involved; and
- 3. The extra investment in advance planning and instrument development required for CATI studies should not be undertaken without the prior recruitment and training of additional senior staff with the appropriate substantive and technical expertise.

GENERAL CONCLUSIONS MID RECOMMENDATIONS

The results of the 1982 Method Comparison Study suggest that telephone-based methods are feasible and cost-effective for NES. Given our current estimates of comparative costs for future studies, it is clear that the newer survey methods are generally appropriate for those NES research objectives which could only be accomplished with telephone surveys, and that telephone-based methods can also serve as a valuable complement to household sampling and face-to-face interviewing for the NES time series.

This last point deserves special emphasis, for the Board is considering a dual-frame design for the traditional (Fall) surveys which extent the NES time series. In such a plan, both traditional and telephone-based methods would be employee simultaneously to collect two independent (but complementary) national cross-sections. The resulting telephone interviews would be collected at lower cost and would be used to enlarge the overall sample size for those analyses which require more cases or better coverage of specialized subpopulations. And each sample would serve to correct for known weaknesses in the other, based on the differences better, methods in both coverage and

response rates. As a result, the combined national sample would provide a better description of the potential electorate than has heretofore been possible. At the same time, however, time series analyses be restricted to the personal interview-only component, in to avoid confusing true differences with method effects interpretation of aggregate change over time.

Continuing Methodological And Technical Issues. These general conclusions are already reflected in the Board's long term proposals for data collection although the dual frame design is not currently scheduled for use in 1984. But it is increasingly clear that NES has only begun what must become a continuing program of method-related research, for the cost and data quality tradeoffs associated with newer survey technology continue to change at a very rapid pace. In particular, NES staff and Board members will be engaged in continuing analyses of the 1982 study, with special emphasis on its internal experiments with respect to measurement, congressional district identification, and CATI effectiveness. And any use of a dual frame design for the traditional (or time series) component of subsequent studies will make it possible for NES to replicate basic results from the 1982 study -- and thereby monitor changed in the cost and data quality tradeoffs associated with telephone-based methods. We therefore urge the Board to allocate resources for G continuing evaluation of method differences in sample or measurement quality, and of the cost- and staff-related tradeoffs associated with computer-based techniques.

In summary, the 1982 Method Comparison Project has made it possible for NES to take a major step forward in utilizing new survey techniques to maximize the efficiency of data collection, while maintaining the maximum possible comparability with the NES time series. If appropriate attention is given to the complications posed by using two parallel systems for data collection, future studies should be able to substantially enlarge the set of research objectives that can be accommodated.
